

## LKZS SERIES FORWARD-CURVED BLADE DOUBLE-INLET SHAFT-DRIVEN CENTRIFUGAL FAN

LKZS series double volute forward shaft drive centrifugal fan adopts the special structure that **the impellers of two double inlet centrifugal fans are directly connected to the long shaft of the same motor**, reduces the volume of the whole machine, and can obtain larger ventilation volume under the condition of small installation space.

The **fluid model** of this series of fans has been optimized by CFD advanced technology, which not only increases the output pressure, but also reduces the noise and improves the efficiency. It has the characteristics of energy saving and low noise. It is especially suitable for **supporting various air conditioning, refrigeration, purification, fresh air units, air curtain machines** and other products, and has been widely used in hotels, hotels, schools, hospitals, factories, refrigerators, cinemas, high-speed rail, urban rail transit, buses, ships and other fields.

### LKZS series of fans has the following remarkable advantages

1. Compact structure, small dimension, large air volume, flexible and simple to install;
2. The optimized forward multi blade impeller is adopted, which has high pressure, low noise, high efficiency, low noise, environmental protection and energy saving;
3. Our **self-developed matching motors** have better reliability and service life than ordinary motors after with optimization of power;

### Work Environment

- 1) Altitude not more than 1000 meters;
- 2) The ambient temperature is not lower than - 25 °C, not higher than 40 °C;
- 3) The relative humidity of the environment shall not exceed 90%;
- 4) The conveying gas does not contain acid, alkaline and corrosive medium, and the dust content is not more than 150mg / m3.

When the working environment does not meet the above requirements, it needs to be explained when ordering. We can customize the product according to the specific site conditions.

## Performance Range

Flow: 350~16000 m<sup>3</sup>/h

Total pressure: 90~900 pa

Beyond this range, please choose other series of our fan products, or contact our technical department for customization.

## Matters Needing Attention

### **1. Before use, please check carefully:**

- (1) Whether the motor lead wires are intact;
- (2) Whether the connecting bolts are loose;
- (3) Whether there is serious deformation of fan volute, impeller, fan shaft and other components;
- (4) Rotate the fan impeller by hand, the hand induction rotation is stable, without obvious stuck phenomenon.

### **2. Installation**

- (1) The fan chassis must be installed horizontally, and it is strictly prohibited to install vertically or obliquely;
- (2) The grounding bolt of the fan shall be connected reliably;
- (3) The fan shall be equipped with phase loss and overload protection devices;

### **3. Start up and Operation**

- (1) Before starting the fan, check the working power supply, which must be within ± 5% of the rated voltage and ± 1% of the rated frequency;
- (2) The rotation direction of the fan impeller shall be the same as that of the turning mark;
- (3) The operating current of the fan shall not exceed the defined current, otherwise the motor will be damaged or burnt;
- (4) When the fan is running, it is strictly prohibited to extend the body or foreign matters to the inside of the fan, and it is strictly prohibited to approach the belt and pulley to avoid danger;
- (5) Before starting the single-phase fan, close the air valve of the outlet channel, otherwise it may be difficult to start;
